Professional Summary

Computer Science student with a passion for software development and engineering. Possessing a technical skillset gained through academic projects and practical application. A proactive learner and effective team player, eager to apply strong problem-solving abilities and a collaborative mindset to contribute to innovative technology projects.

Education

Computer Science (COMSCI) | DCU | 2023–2027

Third Year Results: *UI Design 64, OO Analysis 60, Advanced Algorithms 60, Computability 52, Networking 57, Comparative Programming 47*

Employment History

Cinema Operative | Movies@Dundrum

Nov 2024 - May 2025 • Managed ticket sales, handled hot foods, resolved customer queries, and maintained screening rooms.

- Assisted customers to their allocated seats in screens and supported VIP screenings.
- Developed teamwork and time-management skills in a fast-paced environment.

Sales Assistant | Costcutters, Windy Arbour

Jan 2024 - Aug 2024

- Processed till transactions, handled stock replenishment, and trained new staff.
- Responsible for cleaning, maintaining the store, and other miscellaneous tasks.
- Promoted to leadership tasks within 2 months, managing both opening and closing procedures.

IT Projects

1.) SenseAIm – CS2 Community Anti-Cheat Platform

- Built community platform with ML-based gameplay analysis to detect cheating in uploaded CS2 clips
- Combined traditional detection methods with AI model predictions for accurate cheat scoring
- Implemented social features (posts, reactions, comments, real-time DMs) around video content
- Developed as 2-person team using Django/React with 53 passing tests

2.) Vibe Coder AI – Gemini-Powered Code Generation Tool

- Built interactive web application using Google's Gemini API to generate JavaScript code, canvas drawings, and games from natural language prompts across three modes
- Implemented conversation memory system maintaining context across generations and live iframe preview for safe code execution
- Added random idea generator with curated prompts and mode-specific validation rules for reliable output

3.) Custom Shell – Unix-like Shell in C

- Developed functional Unix shell from scratch in C with Makefile build system supporting both interactive and batch modes
- Implemented core internal commands (cd, clr, dir, environ, echo, help, pause, quit) and external program execution via process forking
- Added file redirection handling, error management, and comprehensive user input parsing

Skills

Programming Languages: Python, Java, JavaScript, C, Haskell, Prolog, Shell Scripting

Web Development: HTML/CSS, React, Git

Systems & Platforms: Linux, Windows, UNIX/GNU, DevOps
